

## **Invited: Upcoming and recent surveys of massive star forming regions**

**- Mark Thompson**

I will review recent and upcoming surveys of massive star forming regions, focusing on the recent advances of Hi-GAL, ATLASGAL, JPS and CHIMPS surveys and looking forward to the impact of future upcoming survey projects. New facilities and new investments of telescope time in large surveys have the potential to transform the field, particularly in spectroscopic and interferometric surveys.

*Upcoming Facilities & Future Surveys*
